Software developer with a deep understanding of web fundamentals and experience writing scalable, accessible, and performant software. Comfortable working closely with designers and product owners to understand requirements, create work plans, and deliver features.

Education

University of Florida – BSc in Computer Science

Aug 2016–Dec 2019

- Graduated cum laude with a cumulative GPA of 4.0.
- Anderson Scholar Award recipient (Highest Distinction, 2018).
- Florida Bright Futures Academic Scholarship recipient (2016–2019).

Experience

Esri (StoryMaps) – Software Development Engineer II

Sep 2020–Present • Remote

- Developed a web-based rich text editor with React, TypeScript, and Slate.js that greatly improved the StoryMaps content authoring experience. Co-led this initiative, closing 100+ tickets and fixing known bugs that had negatively impacted users for years. Wrote unit tests and documentation for all editor functionality to ensure resilience and educate developers. Currently the primary code owner and point of contact for text editing on our team; provide ongoing maintenance, review PRs and work plans from other developers, fix bugs, and prototype new text editor enhancements.
- Delivered high-impact features with React, TypeScript, and CSS in our Next.js app, including: responsive and performant data tables with rich text editing support; new theming options for authored content; new rich text formatting options; theme integration with third-party APIs like Google Fonts; custom template workflows; and more.
- Collaborated with Esri's ArcGIS JS SDK team to migrate web components from Stencil to Lit. Wrote a logging library in TypeScript that resolved tech debt issues and fixed memory leaks.
- Took initiative to create prototypes for new features and enhancements. Created Codepen demos with HTML and CSS to help guide our design team's decision-making and research.
- Served on an internal accessibility working group. Solved challenging accessibility problems with HTML, CSS, and TypeScript to help our team meet WCAG compliance and pass third-party audits.
- Continuously improved our code quality and developer experience by flagging and fixing technical debt and bugs, delivering workshops to share knowledge with the team, writing missing documentation, and modernizing old code to follow best practices.
- Mentored new hires and junior developers to help them succeed on our team. Paired with other developers to help unblock their work. Occasionally interviewed new hires/candidates.

Software Projects

aleksandrhovhannisyan.com

[Live link](#) • [Source code](#)

- My personal website and blog where I publish software development tutorials and essays.
- Select articles have been featured in the Frontend Focus newsletter ([461](#), [525](#)) and other sites.
- Metrics (Google Search Console, last 12 months): 44k clicks, 6M impressions.
- Tech stack: Eleventy (static site generator), TypeScript, CSS, Node.js.

Fluid Type Scale Calculator

[Live link](#) • [Source code](#)

- Web app that allows users to generate fluid font size variables using CSS clamp.
- Live preview mode, progressively enhanced link sharing, and [a companion tutorial](#) on my blog.
- Featured in: [Frontend Horse \(issue 8\)](#), [CSS Weekly \(issue 502\)](#), [Smashing Newsletter \(issue 404\)](#).
- Tech stack: SvelteKit (Svelte), TypeScript, Sass.

Raycasting in JavaScript

[Live link](#) • [Source code](#)

- Demo of 2D and 3D raycasting using TypeScript and an HTML canvas (no WebGL).
- Initially implemented in Lua for the TIC-80 fantasy console ([view on GitHub](#)).
- Tech stack: HTML, CSS, TypeScript, Vite.

Blur

[Live link](#) • [Source code](#)

- Browser extension to blur selected text and media. Compatible with Chrome and Firefox.
- Tech stack: HTML, CSS, TypeScript, Vite.

Skills

Programming languages: TypeScript, JavaScript, HTML, CSS, Sass, C++, Python, Lua, SQL

Frameworks, libraries, APIs: React, Next.js, Svelte, SvelteKit, Web components, Web extensions

Back end: Node.js, Bun, PostgreSQL, nginx

Tools and technologies: Git, Docker, Bash, Linux, Vite, Webpack

Engineering practices: OOP, Unit testing, Web performance, Accessibility, SEO, Documentation

Communication: English (native), Armenian (native), Copywriting, Copyediting
